Introduction of PlatinX

Crypto PlatinX is a Financial technology (FinTech) based Company which uses technology and innovation that aims to compete with traditional financial methods, in the delivery of financial services.

Crypto PlatinX uses peer-to-peer technology to operate with decentralized exchange systems; Managing transactions and issuing of PlatinX is carried out collectively by the network. PlatinX is an open-source and its design is public, thus, nobody owns orcontrols PlatinX, rather everyone and anyone can be a part of it.. Through many of its unique properties, PlatinX allows exciting utilities that have not been covered by any existing asset or exchange system.

Crypto PlatinX is a virtual asset powered by the BNB (Binance) blockchain technology. It is a non-fungible, but transferrable digital asset stored in a smart wallet through a smart contract.
It can be acquired through:

- Swapping with any other existing and listed digital asset
- Buying from the Exchange's directly

Binance coin is the most valuable of the three cryptos mentioned above. But, why this is the case? Now, we take you to the evolution of Binance based coin "Platinx" in this whitepaper.
